

BEAUFLORS ANTIBACTERIAL PROTECTION

TOTAL PEACE OF MIND

Discover our new antibacterial technology
in our **Bacteria Shield+**

A selected range of our vinyl floors* are now produced with our **Bacteria Shield+** technology. Our **Bacteria Shield+** PU lacquer includes biocides which prevent the growth of bacteria on the surface of our floors. Our vinyl floors that have been treated with our **Bacteria Shield+** lacquer have been tested according to ISO 22196 standards which measures antibacterial activity on surfaces. The antibacterial activity is the difference of the viable cell count found on a floor treated with **Bacteria Shield+** lacquer and a floor without this treatment after inoculation with and incubation of bacteria over a period of 24 hours. Results show that 99.9% of all bacteria have vanished, so this demonstrates the floor not only prevents surface bacteria growth but even kills them.
